Gene 177:83-85(1996).

-- CATALYTIC ACTIVITY: (R)-2,3-dlhydroxy-3-methylbutanoate +

-- (S)-2-hydroxy-2-methyl-3-oxobutanoate + NADPH.

-- PATHWAY: Valine and isoleucine biosynthesis; second step.

-- SIMILARITY: BELONGS TO THE KETOL-ACID REDUCTOISOMERASE FAM
                                                                                                                                                                                                                                                                                                                                                                                                                                      059500;

          Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                          Score
